Vidhi V.

Data Analyst | Aspiring Data Engineer

Mumbai, India | GitHub: github.com/veriperi | LinkedIn: linkedin.com/in/veriperi|
Email: vidhivesmaker@gmail.com

SUMMARY

Data Analyst with 3+ years of experience working with structured data, content analytics, data quality, and reporting. Currently building hands-on experience in data engineering through projects involving Python, SQL, PostgreSQL, dbt, Apache Airflow, Docker, and REST APIs. Built an end-to-end data pipeline that ingests podcast data, enriches it using an LLM, transforms it through Bronze, Silver, and Gold layers, validates the resulting data, and serves analytics through a dashboard. Looking to move into a Data Engineering role where I can apply my analytical background while developing deeper expertise in data pipelines, databases, and cloud data platforms.

TECHNICAL SKILLS

Languages: Python, SQL, DAX
Data Engineering: ETL/ELT, Data Pipelines, Data Validation, Data Quality Checks, Data Transformation, Batch Processing, Bronze/Silver/Gold Architecture
Databases: PostgreSQL, Relational Data Modeling
Data Tools: dbt, Apache Airflow, Microsoft Excel, Power Pivot
BI & Visualization: Power BI, Streamlit, Plotly, PivotCharts, DAX
APIs & Data Ingestion: REST APIs, RSS Feeds, FastAPI, Python Requests
Development Tools: Git, GitHub, Docker, Docker Compose
Other: Data Analysis, SEO Analytics, Google Search Console, LLM-based Data Enrichment

PROJECTS

Content Intelligence Pipeline

Python | PostgreSQL | dbt | Apache Airflow | FastAPI | Docker | Groq LLM | Streamlit

GitHub: github.com/veriperi/content-intelligence-pipeline

- Built an end-to-end pipeline to ingest podcast data from public APIs and RSS feeds using Python and FastAPI.
- Designed a Bronze, Silver, and Gold architecture in PostgreSQL with dbt transformations for cleaning, deduplication, and aggregation.
- Built an Apache Airflow DAG to orchestrate ingestion, LLM enrichment, dbt transformations, and data quality checks.
- Containerized the pipeline with Docker and built a Streamlit dashboard for analyzing content quality and pipeline output.

E-Commerce KPI Dashboard

Microsoft Excel | Power Pivot | DAX | Relational Data Modeling

GitHub: github.com/veriperi/ecommerce-kpi-dashboard

- Built a relational data model using 8 normalized tables from the Olist e-commerce dataset containing 99,441 orders.
- Created DAX measures for revenue, average order value, repeat purchase rate, delivery performance, and review scores.
- Identified and resolved a customer ID issue to ensure accurate customer-level analysis and avoid incorrect KPI calculations.
- Built an interactive dashboard using PivotCharts and slicers to analyze sales, customer, product, and delivery metrics.

PROFESSIONAL EXPERIENCE

Feedspot
Data Analyst and Digital Marketing Associate
July 2023 – Present | Mumbai, India

- Research, maintain, and validate large-scale podcast and media datasets covering podcast details, hosts, categories, social profiles, and contact information.
- Analyze 20 to 25 podcast niche topic lists weekly using internal audit scores, analytics, and Google Search Console data.
- Identify data quality issues, irrelevant records, and AI-generated entries, then clean and restructure datasets to improve content accuracy.
- Build Excel and Google Sheets reports to track changes in audit scores and analyze the impact of data and metadata updates.
- Work with large datasets and repetitive validation workflows, maintaining data accuracy and consistency across internal systems.

EDUCATION

Bachelor of Engineering in Information Technology
University Of Mumbai
2023 | 8.76 CGPA

ADDITIONAL EXPERIENCE

- Hands-on experience building data pipelines independently using Python, PostgreSQL, dbt, and Airflow.
- Familiar with Git/GitHub workflows and containerized development using Docker.
- Strong interest in data engineering, analytics engineering, and AI-enabled data systems.
- Currently developing practical knowledge of cloud data warehouse concepts and modern data engineering workflows.
