PROFESSIONAL SUMMARY

Data Engineer-focused Data Analyst and B.E. Information Technology graduate with 3 years of experience working with real-world datasets, and strong **analytical and problem-solving skills**. Hands-on with **Python** and **SQL**, and built **data pipelines** and processing systems with **Apache Airflow**, **dbt**, **PostgreSQL**, and **Docker**. Gained practical experience on **cloud-based platforms** with **AWS (S3, EC2)**, and currently building a **Spark**, **S3 data lake**, and **Snowflake** pipeline, and upskilling in **PySpark**, **CI/CD practices**, and **SQL Server / Azure SQL**. Eager to grow in modern data engineering alongside senior engineers. Open to **Junior Data Engineer**, **Associate Data Engineer**, and **Data Engineer** roles.

TECHNICAL SKILLS

Programming: Python, SQL
Data Engineering: Data pipelines, ETL/ELT, API data ingestion, data transformation, Bronze/Silver/Gold data layers
Tools: Apache Airflow, dbt, Docker, Git, GitHub
Databases: PostgreSQL, SQLite, SQLAlchemy
Cloud: AWS S3, AWS EC2
Data Quality & Reporting: Data profiling, validation, cleaning, Excel (Pivot Tables), Google Looker Studio, Streamlit
Currently Upskilling: PySpark and Apache Spark, Snowflake, CI/CD practices (GitHub Actions), SQL Server and Azure SQL, AWS Glue and Redshift, Tableau

PROFESSIONAL EXPERIENCE

Feedspot | Data Analyst and Digital Marketing Associate **July 2023 – Present**

- Contribute to an upcoming product for agencies and creators (confidential), building its creator database and supporting product development.
- Work with large real-world datasets of podcast records, including profile, host, contact, social link, and topic classification data.
- Perform data profiling, validation, cleaning, and quality checks to keep internal media databases accurate, complete, and consistent.
- Monitor audit scores and performance across approximately 20–25 niche topic lists per week, identifying inconsistencies and updating records or metadata.
- Solve classification and content-quality problems by finding root causes, removing irrelevant entries, and keeping categorisation consistent.
- Apply AI-assisted research and classification workflows, validating outputs and correcting inaccurate results before updating records.

PROJECTS

Content Intelligence Pipeline | GitHub **Python, Airflow, PostgreSQL, dbt**

- Designed and built a data pipeline that ingests real-world podcast data from public APIs and processes it through Bronze, Silver, and Gold layers.
- Orchestrated workflows with Apache Airflow, modelled transformations with dbt on PostgreSQL, and ran the stack in Docker.
- Solved load failures by identifying database locking as the root cause and migrating concurrent loading from SQLite to PostgreSQL.
- Fixed Docker volume and SQLAlchemy compatibility issues, and added LLM-assisted categorisation and quality scoring.

Nifty 50 Market Data Pipeline | In Progress **Spark, AWS S3, Snowflake, Tableau**

- Building a cloud-based pipeline on Nifty 50 minute-level market data, processing raw files with Apache Spark into an AWS S3 data lake (Bronze/Silver/Gold).
- Loading curated data into a Snowflake warehouse, with dashboards in Tableau Public.

WholeVegan Analytics Engineering Project | GitHub | Dashboard **PostgreSQL, Streamlit**

- Built a PostgreSQL analytical data layer on synthetic e-commerce order data, serving business metrics through a Streamlit dashboard.

E-commerce KPI Dashboard | GitHub

- Developed a dashboard to organise and visualise e-commerce performance indicators for reporting and analysis.

EDUCATION

B.E. in Information Technology | University of Mumbai | Academic score: 8.7 **2023**

INTERESTS

Short-form video creation: created and edited 15 YouTube Shorts on a personal channel, reaching 12,503 views.
